

clinically proven

to support cardiovascular health

Take It to Heart

Every 35 seconds, someone in America dies of cardiovascular disease (CVD). Although many of these deaths are preventable, controlling risk factors such as cholesterol and triglycerides can be difficult.

CardioSentials® offers an easy nutritional solution to fit your busy lifestyle. Just one scoop of berry-flavored CardioSentials a day can help reduce total cholesterol, LDL (bad) cholesterol and triglycerides, as well as increase HDL (good) cholesterol and lower blood glucose levels. It's been proven effective in a clinical trial.

With CardioSentials, you can pursue heart health without missing a beat.

Total Heart Health

CardioSentials contains a patented blend of powerful nutrients to support cardiovascular health — and it starts with phytosterols. The National Cholesterol Education Program recommends 2 grams of phytosterols per day to reduce heart disease risk by blocking the absorption of dietary cholesterol. CardioSentials provides 1.5 grams of phytosterols per serving, plus several other heart-healthy ingredients:

Policosanol: helps maintain normal cholesterol and enhances coronary blood flow.

VitaBerry®: relaxes arterial walls to promote efficient blood flow.

CoQ10: energizes the heart and protects against damaging free radicals.

Gugulipid: maintains healthy levels of cholesterol and triglycerides and protects against hardening of the arteries.

Resveratrol: for heart and cell-protective benefits similar to those derived from red wine.

CardioSentials was clinically shown to reduce key risk factors for heart disease.

Clinically Proven

A study published in the *Journal of Complementary and Integrative Medicine* showed CardioSentials to be effective in lowering risk factors for cardiovascular disease. The double-blind, placebo-controlled clinical trial tested individuals taking statin medications and participants not on statins. Both groups significantly reduced key risk factors for CVD. (All numbers are averages.)

- Total cholesterol - 7%
- LDL (bad) cholesterol - 9%
- HDL (good) cholesterol + 4%
- Triglycerides -13%
- Fasting glucose - 6%
